

HOW DO WE CLEAN CORONAVIRUS?

Coronavirus has quickly gained a reputation for being particularly insidious. It can survive on surfaces for up to a week and people infected by the virus don't show symptoms until approximately two weeks after infection, making it difficult to track and contain. This is why having a trusted professional **hazard remediation** company on your side is so important.

Deep South Industrial Services - Georgia adheres to all OSHA regulations and strictly follows the most state-of-the-art procedures when it comes to disease cleanup and disinfection. Coronavirus (COVID-19) is still novel, so we continually consult with the Centers for Disease Control & Prevention (CDC) for up-to-date solutions and our cleaning standards are in line with CDC protocols.

DISINFECTING CORONAVIRUS

- We follow CDC protocols and use CDC approved industrial-strength disinfectants with a broad spectrum kill claim.
- All infected materials are cleaned, disinfected, and properly disposed of as biohazard waste.
- Protective coveralls and N-95 masks are worn at all times by our certified technicians.
 - We adhere to a stringent demobilization process for our trucks, equipment and waste storage areas.

Disease outbreak is an extremely serious situation and we understand that the health and safety of you, your family, and employees are on the line.

Don't take any chances; contact **Deep South Industrial Services - Georgia**.
